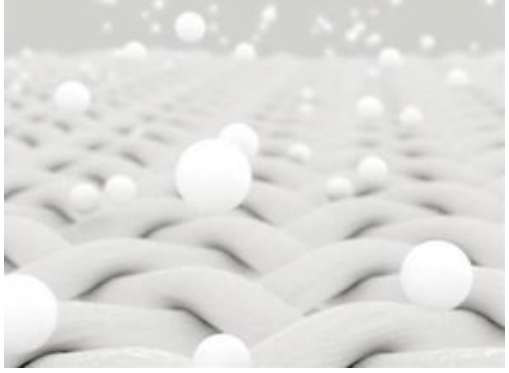
Buzz introduces MicrobeBARRIER protection for rotable cabin textiles

Buzz has launched an antimicrobial treatment convenient for textiles, including facemasks for passengers

Buzz has announced a new wellness initiative for cabin interiors. MicrobeBARRIER is a broad-spectrum antimicrobial treatment that is lab tested and proven to reduce the presence of germs in fabrics, according to the September 15 press release from Buzz.



MicrobeBARRIER helps prevent the growth and spread of germs and other micro-organisms within the treated fabric

Applicable to a wide range of materals, MicrobeBARRIER helps prevent the growth and spread of germs and other micro-organisms within the treated fabric. While it is convenient for fixed textiles, such as seat coverings, curtains and more, it can also be used on rotables including blankets, facemasks and plush.

Buzz as launched protective wear with MicrobeBARRIER for Etihad Airways First and Business Class passengers

MicrobeBARRIER protects from bacteria, mildew, mold and odors caused by heat, moisture and organic matter that builds up or lands on textile.

Most recently, Buzz launched protective wear treated with MicrobeBARRIER for Etihad Airways First
