
TAP A330-900neo on board with Aeromobile

By **Rick Lundstrom** on March, 12 2019 | Connectivity & Satellites

Panasonic subsidiary [Aeromobile](#), announced today TAP Air Portugal's first connected [A330-900neo](#) entered into service late last year.

TAP Air Portugal, is the first airline in the world to operate the next generation A330-900neo aircraft. The onboard Aeromobile service allows passengers in all cabin classes to use their mobile devices to send and receive SMS, catch up with emails and browse the Internet.

Following the successful launch of its first aircraft with inflight mobile connectivity, TAP will add 37 aircraft over the next year, reaching a total of 71 aircraft by 2025. The A330-900neo fleet with inflight mobile connectivity will be deployed on services to Sao Paulo, with four other Brazil destinations launching this year.

"We're delighted to welcome TAP Air Portugal as a customer and to provide mobile connectivity services on their first A330-900neo aircraft. TAP Air Portugal joins our ever-growing fleet of our partner airlines, making inflight mobile services more accessible to travellers than ever before." said Kevin Rogers, CEO of AeroMobile, in today's announcement.

AeroMobile provides technology that allows the safe use of passengers' own mobile phones onboard aircraft. The company has roaming agreements with more than 350 network operators globally allowing passengers from over 145 countries to use their phone inflight. Since 2008, over 40 million passengers have successfully connected to the AeroMobile network inflight.
