# Semmco plans full line of products for Dubai event

By **Rick Lundstrom** on February, 7 2020 | Cabin Maintenance

Semmco's The Nitrogen SMART Trolley reduces the need to lift gas cylinders

[Semmco](#), British based design and engineering company specialising in a wide range of aircraft access and ground support equipment will feature product range at this year's [MRO Middle East and Aircraft Interiors Expo Middle East](#), at booth 930 from February 25-26 at the Dubai World Trade Centre.

Since establishing in Dubai in 2016, Semmco DWC LLC has supported clients including Emirates, flydubai, Etihad, Gulf Air and Oman Air.

Semmco joins 330 exhibitors and more than 5,000 attendees demonstrating key products on-stand throughout the exhibition, including those manufactured at the Dubai facility: the DWC 4 Wheel Towable Wheel & Brake Changer Unit, DWC UCAS Access Steps, DWC MLG Access Platform and the DWC Nitrogen SMART Trolley.

Part of Semmco's Middle East support, servicing and maintenance offering, these products showcase

that safety is at the heart of the company's product design. The Wheel and Brake Changer is highly manoeuvrable, with a manually operated winch to reduce manual handling risks associated with heavy aircraft wheels and brake packs.

The Nitrogen SMART Trolley reduces the need to lift gas cylinders, with the cradle system allowing for quick and easy loading and unloading. Both the UCAS Access Steps and MLG Access Platform provide safe access solutions to technicians working varying tasks across a variety of heights and aircraft types.

"We have had a fantastic few years growing the Semmco business in the Middle East, and the MRO exhibition will be a great opportunity for us to connect with existing and potential clients throughout the region, and to showcase our continuing commitment to manufacturing and servicing locally," says Stuart McOnie, Semmco Managing Director, in a release from the company. "We're looking forward to being part of the region's leading aviation maintenance event, and to demonstrate our localised product and support offering".
