# Zero catering waste with Gobi

By **PAX International** on September, 7 2018 | Cabin Equipment

A look at Gobi in action

Gobi offers a revolutionary solution for a zero catering-waste goal and leak problems that can occur during a flight. With its power to absorb 150 times its weight, Gobi collects the liquid waste to allow the isolation of international catering waste (ICW) and the recycling of non-contaminated material. Composed of recycled super absorbent, it turns the liquids into a solid form, thus preventing any chance of leaks. Contact [Onboard Logistics](#) for more information.
