

Eutelsat advances next era of IFC with OneWeb LEO

This is a special feature from the [April 2026 AIX Hamburg issue](#) of *PAX Tech*, on [page 10](#).

Eutelsat's high-performance OneWeb LEO network is complemented by its GEO capabilities

At [AIX 2026](#), [Eutelsat](#) is ready to showcase how its high-performance OneWeb LEO network, complemented by its GEO capabilities, are redefining inflight connectivity performance, offering airlines both flexibility and global reach.

At a glance, Eutelsat reports more than 600 aircraft equipped with OneWeb LEO connectivity today, 15+ airline commitments, including American Airlines and Air Canada, and 440 additional LEO satellites ordered to enhance performance and capabilities.

"Eutelsat's model is designed to deliver flexible and tailored connectivity solutions that meet the diverse operational and passenger experience needs of modern airlines and business jets," the company tells *PAX Tech*.

Eutelsat will exhibit at Booth 2C10 and invites attendees to discover how airlines worldwide are leveraging their expanding network to deliver consistent, high-quality broadband experiences across every route and aircraft type.
