

PXCom bridges digital innovation and inflight reality with SkyVerse

This is a special feature from the November 2025 [APEX FTE Asia Expo issue](#) of *PAX Tech*, on [page 5](#).

PXCom will showcase SkyVerse at APEX FTE Asia Expo

[PXCom](#) will be showcasing its flagship platform at APEX FTE Asia Expo 2025 in Singapore. SkyVerse is a Wireless IFEC software redefining inflight engagement through design, personalization and seamless connectivity.

By transforming the cabin into a connected digital ecosystem, PXCom enables airlines to enrich entertainment, retail and communication channels—while generating new revenue streams and strengthening passenger loyalty. The company’s solutions integrate easily within existing aircraft systems, ensuring quick deployment and local CAA Compliance.

PXCom aims to demonstrate how SkyVerse turns IFE into a strategic digital asset. The team will connect with airlines, OEMs and connectivity providers to explore opportunities that enhance onboard experiences and deliver measurable ROI.

“One size does not fit all,” PXCom tells *PAX Tech*. “We begin by understanding each airline’s expectations and constraints, present the possible configurations, and then recommend the exact solution they need.”

Beyond its technology, PXCom brings business opportunities and a network of handpicked partners to generate incremental revenue. One of its major strengths is integration beyond the cabin, turning the inflight digital platform into the third airline digital touchpoint, seamlessly complementing the website and mobile app.
