

SAS completes Starlink installation across A320neo fleet

SAS has completed Starlink installation across its A320neo aircraft, now offering passengers inflight Wi-Fi

[SAS](#) has completed Starlink installation across its entire A320neo fleet in just six months. With all 81 A320neo aircraft now equipped, high-speed Wi-Fi from Starlink is available on a significant share of the airline's European flights. Through SAS' partnership with 3, EuroBonus members can access the service free of charge, whether they want to work, stream, stay in touch or simply browse the internet throughout their journey.

When SAS launched Starlink in March, the ambition was to move quickly and bring high-speed connectivity to as many passengers as possible.

"Today, the installation across our entire A320neo fleet is complete, in record time. Bringing high-speed connectivity to these aircraft means many of our customers can enjoy a better-connected journey. Being connected has become a natural part of everyday life, and that doesn't change when we board a plane. With gate-to-gate connectivity, our customers have more freedom to choose how they spend their time traveling with us," said Paul Verhagen, Executive Vice President and Chief Commercial Officer at SAS.

The installations have been carried out alongside SAS' normal flight operations, with each aircraft undergoing installation, testing and approval before returning to service.

The A320neo fleet represents around 70 percent of SAS' total fleet and forms the backbone of SAS'

European network, operating a large share of flights across Scandinavia and Europe. The completion of the A320neo rollout also makes it the first aircraft type in the SAS fleet to be fully equipped with Starlink.

SAS is now moving ahead with the next phase of its Starlink rollout, with installation preparations progressing for the remaining aircraft types and further installations planned before the end of the year.

The completion of the A320neo rollout comes during SAS' 80th anniversary year.
