

Bluebox and Tigerair Taiwan partner to bring wireless IFE to A320 fleet

This is a special feature from the [April 2026 AIX Hamburg issue](#) of *PAX Tech*, on [page 8](#).

Tigerair Taiwan selects Bluebox for wireless IFE across A320 fleet

Tigerair Taiwan selects Bluebox for wireless IFE

[Bluebox Aviation Systems](#) will highlight its latest digital services platform at Aircraft Interiors Expo (AIX) 2026 following the announcement of a new partnership with [Tigerair Taiwan](#).

The collaboration will introduce a wireless inflight entertainment experience across the airline's fleet of 17 A320 aircraft, marking Tigerair Taiwan's first deployment of IFE. Passengers will be able to access a curated library of movies, television, audio and games streamed directly to their personal devices, including both regional content and DRM-protected Hollywood titles.

The new digital platform will also support Tigerair Taiwan's future onboard retail ambitions, with order-to-seat services planned for a later phase as the airline continues to expand its ancillary revenue offering.

At the expo, Bluebox will demonstrate how its Blueview digital services platform enables airlines to launch inflight entertainment and retail quickly while evolving seamlessly across portable, embedded and cloud-based environments.
