FlightPath3D makes 2025 Inc. 5000 List

FlightPath3D recognized as one of the fastest growing private companies in the U.S.

FlightPath3D has announced its inclusion in the 2025 Inc. 5000 list, ranking among the fastest-growing private companies in the United States. The recognition marks a key milestone for the company, which now flies on more than 5,000 aircraft worldwide on 90+ airlines.

“We are honored to be recognized by Inc., and even more grateful to our customers whose trust makes it possible,” said FlightPath3D President Duncan Jackson. “This growth fuels our investment in engineering to continue building innovations that push the aviation industry forward.”

FlightPath3D launched in 2012 with a mission to guide every flying passenger. The company has evolved traditional inflight maps in the years since to deliver a full-featured passenger engagement suite.

Recent product launches include:

- **Luci**: An AI-powered inflight companion delivering live flight details, personalized travel tips, and personalized, branded promotions linked to airline loyalty platforms
- **Accessibility Map**: An innovative, simplified high-contrast display designed specifically for travelers with visual, motor, and/or cognitive impairments
- **Control Tower**: A real-time view of the aircraft’s location on the ground relative to other aircraft, runways, terminal buildings and airport features

On the ground, FlightPath3D helps airports promote their routes and destinations, drive passenger demand, and reduce leakage to competing hubs. With branded, interactive visualizations and destination content, the platform connects the traveler journey from personal device to gate.

“We are building more than a map; we are building a journey experience that is personalized, immersive, and effortlessly enjoyable,” Jackson said.
