

FlightPath3D makes 2026 Inc. 5000 list for second consecutive year

FlightPath3D has been recognized as one of the fastest growing private companies in the United States

[FlightPath3D](#) has announced its inclusion in the 2026 Inc. 5000 list, ranking among the fastest-growing private companies in the United States. This is the second consecutive year the company, trusted by more than 100 airlines and airports and flying on 6,000+ aircraft worldwide, earned this recognition.

Over the past year the company launched three new products, opened a new California headquarters, and added senior leaders from across commercial aviation, business aviation and consumer technology.

"We do not chase a growth number. We listen hard, build fast and dream up the rest ourselves. A five-year-old does not fly like a road warrior, so we build for every kind of passenger," said FlightPath3D President Duncan Jackson.

Since its launch in 2012, FlightPath3D has focused on its mission to guide every flying passenger. It has driven the evolution of the inflight map from a static, broadcast solution to the full-featured passenger engagement suite travelers and airlines love. With its growing world-class engineering

team, FlightPath3D continues to offer new opportunities and pathways for airlines to wow passengers and empower the aviation community.

Product innovations introduced in the past year include:

- [Luci Live](#), transforming the company's AI-powered inflight companion into a real-time two-way conversation, making flight details, destination content and marketing opportunities interactive.
- [Destination Stories](#), delivering passengers a rich visual introduction to their destination the moment they open the seatback map.
- [Studio](#), giving operators direct control to configure and brand the map experience themselves, launched first in business aviation.

The growth highlighted by the Inc. 5000 recognition also reflects increased adoption of Kids Map, Accessibility Map and Cloud Map, all three recognized with industry awards. Kids Map and Accessibility Map bring the inflight map to passengers the industry has long overlooked. Cloud Map delivers the full suite of map layers and interactive experiences via a low-latency inflight internet connection rather than an on-board server, expanding the company's total addressable market while ensuring airlines can deliver a consistent experience to passengers, regardless of aircraft type or route.

"We are building more than a map, we are building the whole journey. Growth like this funds the part passengers never see and our customers never forget. That is more engineers, support and implementation managers behind every deployment," said FlightPath3D CEO Boris Veksler.
