

Oman Air introduces eco-friendly earphone packaging with Linstol

Oman Air and Linstol redesign onboard earphone packaging for Economy Class

[Oman Air](#), in collaboration with [Linstol](#), has redesigned the packaging for its Economy Class earphones, replacing single-use plastic PET foil with a recyclable Kraft paper envelope, as part of its efforts to increase onboard sustainability.

The airline said in its press release that it anticipates the change will eliminate 6.48 tonnes of non-recyclable waste material each year; this equates to saving approximately 110 trees from

deforestation or conserving 207,360 litres of water.

“We are delighted to introduce this latest initiative on board, which represents our ongoing commitment to our planet by reducing the environmental impact of air travel, while ensuring our guests enjoy a comfortable and convenient experience that aligns with their values,” said Con Korfiatis, Chief Executive Officer, Oman Air. “We believe that small changes make a big impact and we continue to look for innovative solutions in all corners of our operations, while promoting and advocating for initiatives that support both the UN Sustainable Development Goals and Oman’s national objectives.”

Oman Air continues to increase its sustainability efforts by integrating eco-friendly materials and cutting waste, supporting a circular economy. Last year, the airline was able to save around 21.6 tonnes of plastic by replacing the wrapping for blankets and mattresses in its premium cabins with an eco-friendlier paper-based alternative, as well as reducing plastic water bottles and cuplets and more efficiently managing its potable water consumption.

The airline has also implemented various emissions reduction initiatives and is engaged in fostering the development of Sustainable Aviation Fuels in support of Oman’s strategy to achieve Net Zero Emissions by 2050.
