

SkyUp and J&C Aero complete 737 cabin interior modification

SkyUp Airlines' twelve 737NG aircraft have undergone a complex and comprehensive cabin modernization

[J&C Aero](#) has completed a complex cabin interior modernization project for Ukrainian charter air carrier [SkyUp Airlines](#). The works covered the airline's twelve 737 NGs.

J&C Aero's team oversaw the certification and installation of new passenger seats, as well as new class dividers, carpets, entry area mats, and additional galley equipment. The company has also produced transition MOD kits and standardized emergency equipment, including the introduction of new-generation [ZOLL Aviation](#) defibrillators. In addition, J&C Aero developed and installed the fleet's new livery and internal marking.

"SkyUp Airlines is a modern carrier with a mindset focused on delivering additional comfort to its international passengers. We are happy to support them with fleet modernization and look forward to future projects as they keep growing," commented Vitalijus Malyška, COO at J&C Aero in a press statement from May 23.

"As a charter airline, we welcome various passenger groups on board our aircraft. The recent cabin interior modernization has allowed us to further improve the flight experience, and for that, we are grateful to J&C Aero that delivered everything on time and as requested," shared a SkyUp Airlines' representative in the same release.
