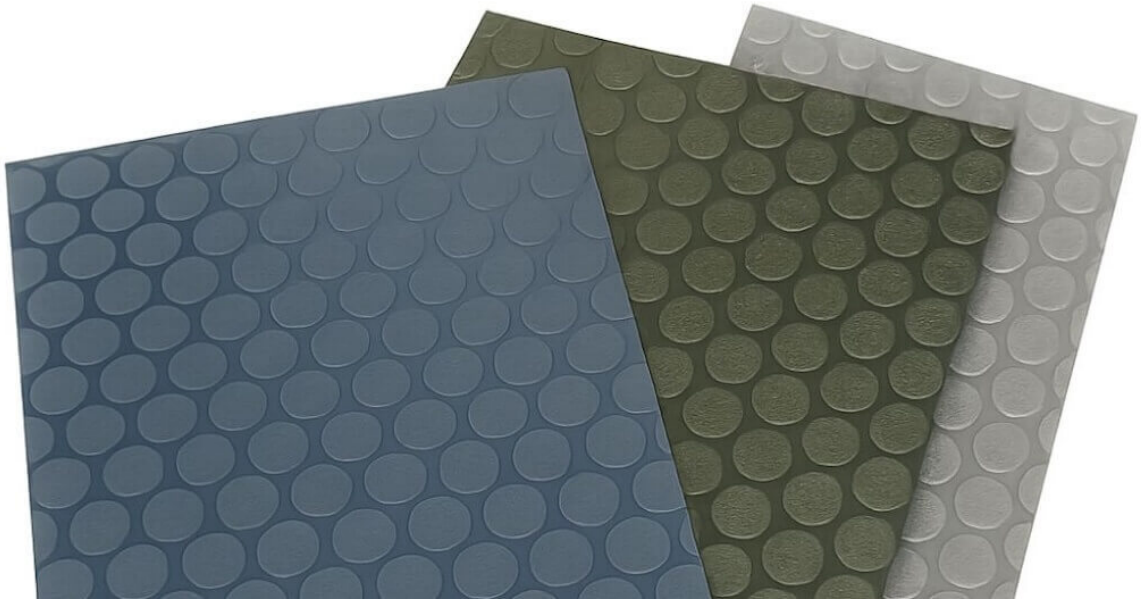
ABC International highlights non-textile cabin flooring

This is a special feature from the October 2026 MRO Europe issue of *PAX Tech*, on page 6.



ABC International's Non-Textile Floor solution is designed for high-traffic aircraft cabin areas, including galleys, entrance zones and lavatories

ABC International is spotlighting its Non-Textile Floor (NTF) solution, developed for demanding aircraft cabin applications including entrance zones, galleys and lavatories.

The flooring combines flame-retardant PVC with optimized geometry to support dimensional stability and dependable performance in high-traffic environments. The NTF solution is designed to remain flat and retain dimensional integrity after prolonged exposure to elevated temperatures, positioning the product as a durable, cost-effective option for cabin interiors.

Key features include slip resistance compliant with CS/FAR 25.793, along with resistance to abrasion, mechanical impacts and everyday operational wear. The flooring also meets CS/FAR 25.853 flammability requirements.

ABC International offers standard color options for rapid delivery, as well as custom finishes to support airline branding and cabin interior design requirements.
