
saf-Tglo® blu cabin lighting picked by Bolivian airline

By **Rick Lundstrom** on October, 2 2017 | Lighting

Bolivian airline, Boliviana de Aviación, has ordered the blue-glowing, photoluminescent floor path marking system saf-Tglo® blu from [STG Aerospace](#) for two of its 737-300s and one of its 737-700s aircraft.

Currently flying to 13 destinations in five countries, BoA is the largest airline in Bolivia for both fleet size and passenger numbers. BoA is the [flag carrier airline](#) of the [Plurinational State of Bolivia](#) and is wholly owned by the [country's government](#).

“As an existing customer of STG Aerospace, we have always been impressed by the proven operational performance of saf-Tglo® products, especially their robustness. With saf-Tglo® blu we can now seamlessly blend our brand identity with our cabin aesthetics due to its exclusive blue glow,” said Carlos Alba, BoA’s Avionics Engineer.

“Latin America is a very important market for us,” said Dan Rice, STG Aerospace’s Americas Sales Director, “so we were particularly pleased that BoA saw the many benefits of saf-Tglo® blu, our latest research-driven photoluminescent product. It helps place us in a very strong position to promote our total cabin lighting system - photoluminescence and LED - throughout the region.”

STG Aerospace currently serves more than 50 customers in Latin America including airlines, MROs, and regional operators. To support the growing MRO market in Latin America, STG Aerospace has recently strengthened its team in the region with the appointment of a new Regional Sales Manager.
