Burrana marks 1,000 aircraft milestone for RISE Power

Burrana is showcasing THE NEW CLASS OF POWER at APEX FTE EXPO in Singapore this week

Burrana has reached a significant milestone, with its RISE Power platform now selected for more than 1,000 aircraft across 27 airlines worldwide.

The achievement marks an important chapter in Burrana's evolution from an emerging market challenger to an established global technology partner, demonstrating increasing airline confidence, proven performance, the ability to deliver at scale and support short program lead-times, the November 16 press release said.

As airlines increasingly recognise in-seat power as essential cabin infrastructure rather than a passenger amenity, Burrana is focused on showcasing THE NEW CLASS OF POWER.

RISE Power is an intelligent power and data platform designed to deliver value throughout the aircraft lifecycle. Beyond reducing weight, simplifying installation and maintenance and lowering total cost of ownership, its integrated insights and data analytics capabilities provide airlines with actionable

intelligence on system performance, passenger charging behavior and predictive maintenance. This visibility enables more informed decisions, improved operational efficiency and greater long-term fleet value.

Its rapidly growing adoption across both linefit and retrofit programs reflect increasing airline demand for in-seat power solutions that deliver measurable value well beyond charging performance.

"Surpassing 1,000 aircraft is a defining milestone for Burrana and a powerful endorsement of what we set out to achieve with RISE Power," said David Pook, VP Global Marketing & Sales at Burrana. "What began as a vision to fundamentally rethink in-seat power has become a proven technology platform trusted by airlines worldwide. This achievement reflects not only the strength of our technology, but the confidence our customers place in our people, our expertise and our ability to deliver."

Burrana credits the success to its engineering team, supported by experienced aviation industry leadership and commercial teams with deep expertise in aircraft cabin systems, program delivery and global customer relationships.

Together, these capabilities have enabled Burrana to translate innovative engineering into a proven, scalable solution, backed by the operational experience and long-term support airlines expect from an established industry partner.

"This milestone is also an opportunity to recognise the people and partnerships that have made our success possible," Pook continued. "From our talented teams to our airline customers, industry partners and collaborators, we recognize and value the trust, commitment and support that have been instrumental in bringing RISE Power to where it is today."

Burrana is exhibiting at APEX FTE EXPO 2026 at the Marina Bay Sands Expo & Convention Centre in Singapore from November 18 to 19.
