

China Southern Airlines receives first aircraft delivery with Burrana's RISE Power

China Southern Airlines receives first Airbus aircraft equipped with RISE power

[China Southern Airlines](#) has received the first aircraft delivery from Airbus with [Burrana's](#) RISE Power system.

The program will see RISE Power installed across at least 37 aircraft with deliveries scheduled from 2025 to 2028.

David Pook, VP Global Marketing and Sales at Burrana said, "We are thrilled to reach this major milestone with China Southern Airlines. The completion of their first RISE Power installation marks our first linefit deployment of USB-C 60W charging and the beginning of an exciting multi-year collaboration. China Southern's decision to equip its Airbus A320 family aircraft with RISE Power underscores their commitment to delivering an exceptional passenger experience while driving efficiency and sustainability. We are proud to support their vision with our industry-leading in-seat power solution."

RISE Power will be seamlessly integrated into the Jiatai JT220 series seats, delivering modern power options for all passengers. The USB-C 60W specification ensures high-powered, rapid, and reliable charging for personal electronic devices, including laptops, enhancing passenger comfort and eliminating charging concerns on even the longest flights.

Burrana's RISE Power offers:

- A seat box is comparable to the size of an iPhone, with no intrusion into passenger legroom
- A light weight, as low as 200g per seat, helping reduce fuel burn and CO₂ emissions by up to 30 percent
- First-to-market 15W USB-A, with 50 percent faster charging and easy USB-C upgrades
- Intelligent Power Management, real-time data capture and port-level control for new revenue streams

With close to 500 aircraft selected globally, the RISE Power system is fully compatible with both retrofit and linefit applications and is available in the A320 family BFE Catalogue as a selectable ISPS option.
