

Jamco designing seat for high-density Biz Class

The Quest for Elegance seat increases knee space and features a tilting screen

[Jamco Corporation](#) is developing a new “Quest for Elegance” Business Class seat concept for high-density cabins.

With a patented angled tilt monitor and an industrial design the Quest seat was awarded the [iF DESIGN AWARD 2022](#), one of the most prestigious international design awards.

The Quest Seat features a one-of-a-kind tilting entertainment screen with a wide-angle adjustment, allowing passengers to enjoy entertainment in either reclined, sleep, or bed mode position. The tilting monitor option results in 30 percent more knee space than any other high density Business Class seat offered.

For those traveling in pairs, the Quest Seat reveals a roomy super full-flat bed when two center seats are combined. Also available for those seeking more privacy are easily deployable partitions and an optional aisle side door.

Jamco expects to have the Quest ready for installation in 2024 or early 2025.
