

Jamco highlights Business Class seats and cabin

Jamco Corporation will be exhibiting its seating and cabin products at AIX 2023

[Jamco](#), the Japanese aircraft interior manufacturer, is set to unveil its latest Business Class seat concepts at the Aircraft Interiors Expo (AIX) 2023, held in Hamburg, Germany. The concepts offer a glimpse into Jamco's vision for the cabin of the future.

Jamco will showcase the “Quest for Elegance” staggered Business Class seat concept. This design caters to the demand for spacious and creative seating options in high-density Business Class cabins while ensuring maximum comfort. The Quest seat boasts an industrial design that exudes an elegant and luxurious feel, resembling a premium hotel experience in the sky. Additionally, the seat includes a newly patented angled tilt monitor and offers competitive density.

The Venture Seat by Jamco is a Business Class seat that combines sustainability and comfort with cost-efficiency for airlines. Its design incorporates a significant portion of recycled materials, reducing weight and simplifying installation and maintenance.

In a showcase of their vision for the future of air travel, Jamco will reveal a video of their innovative cabin at AIX 2023. Attendees at the Jamco stand, 6A100, will have the opportunity to experience a virtual reality demonstration of the company's advanced galley and lavatory technologies.
