
Lantal's newest innovation: seat heating and cooling

By **Rick Lundstrom** on April, 1 2019 | Seating

Among the advanced materials and stylish designs at [Lantal's](#) stand in Hamburg this year is a system that achieves temperature comfort for seated passengers.

Lantal's heating and cooling system is based on [Gentherm®](#) technology. The modular system components can be easily combined and integrated into any seat concept. Installation and disassembly are simple and convenient. The result is optimized seat temperature profiles for each passenger with continuous moisture extraction to assure dry seat surfaces.

Visitors to this year's Aircraft Interiors Expo have the opportunity to test the function on site at Stand 6E70 in Hall B6.
