

Swiss company's products will be on the Virgin A330-900neo

Virgin Atlantic's first A330-900neo was recently delivered

[Bucher](#) has shipped the first set of fully customized galleys and stowages to Airbus Toulouse for integration into the new [Virgin Atlantic](#) A330-900neo. The airline has taken delivery of the first aircraft.

In 2011, Bucher was able to implement the order for the first generation A330 for Virgin Atlantic. Bucher has now also been selected as the airline's Buyer Furnished Equipment (BFE) partner for the follow-up order.

Bucher's galleys are made of up to 65 percent recyclable aluminum. With the help of a specialized team, Bucher looks to further expand on their sustainable processes and materials.

"Bucher is known for its high quality and first-class service through short lines of communication; we are pleased that Bucher has supplied exceptional galleys and stowages for our new A330-900neo aircraft. We look forward to welcoming its customers on these beautiful aircraft," said a statement from Virgin Atlantic.

Bucher has expanded its product offering to also include composite and carbon fiber materials, thus allowing the company to easily and efficiently adapt its products to meet individual customer requirements.
