

# Aeromexico, Skyteam and Kaelis partner for greener future

Kaelis' collection of eco-friendly products made from recycled, biodegradable, compostable materials

The commitment to achieving a sustainable future for the planet has led [Aeroméxico](#) and [Kaelis](#) to take on the "The Sustainable Flight Challenge." The [Skyteam](#) initiative challenges participating airlines to find the most sustainable way to operate a single flight in their networks and thus take responsibility for a sustainable future in the airline industry.

Keeping the concept of circular economy in mind, Kaelis has created a collection of environmentally friendly products made from recycled, biodegradable, compostable materials which are reusable and recyclable.

Passengers on this Aeromexico flight will enjoy maximum comfort thanks to the fact that a large number of plastic bottles have been recycled and transformed into a wonderful blanket and pillow, and that lunch and dinner will be served with a range of sustainable products such as cups, napkins and cutlery made from eco-friendly materials: sugar cane, bamboo or recycled paper, thus avoiding single-use plastics or plastic containers.

“The ability of Kaelis to innovate is what distinguishes us and will propel us to a new stage in environmental care and the development of a more sustainable future,” reads the May 9 press release.
