

GIP unveils innovative airline mattresses for ultimate inflight comfort

This is a special feature from the [March 2025 Special Meals/Pre-WTCE](#) digital issue of *PAX International*, on [page 4](#).

Air mattress from GIP

Global Inflight Products ([GIP](#)) is revolutionizing air travel experience and comfort with the launch of its latest airline mattresses, designed to enhance passenger experience and comfort. The compact and lightweight mattresses are designed to provide superior support, ensuring a more restful journey.

The newest addition to the collection is GIP's patented air mattress. It can be a single use item due to the cost being less than half of the cost of drycleaning. Not only is it compact, lightweight and exceptionally comfortable, but it is also fully recyclable, making it a sustainable choice for airlines committed to reducing the environmental footprint.

To further elevate the passenger experience, the mattresses feature removable covers available in a range of materials, allowing airlines to customize comfort and aesthetics to suit the brand.

With GIP's latest innovation, airlines can offer travellers premium inflight rest while balancing the limited space around the seat.
