

# Linstol showcases next-generation textile innovations at WTCE 2026

A selection of Linstol textiles demonstrates advanced materials and design for enhanced inflight comfort

[Linstol](#) unveiled its latest advancements in inflight textiles at WTCE 2026, introducing a dedicated Textile Innovation Hub designed to highlight the evolving role of materials in passenger comfort and onboard experience.

The showcase, part of the company's "Art of Delivery" concept, focused on how advanced materials and responsible production are shaping the future of inflight comfort across all cabin classes.

At the center of the display were three new textile innovations: NexSeam, Forever Weave and Cloud Comfort, each designed to enhance different aspects of the passenger experience.

NexSeam introduces seam-free construction for loungewear, reducing irritation and improving fit,

while Forever Weave focuses on recycled and durable materials, supporting circular solutions within airline supply chains.

Cloud Comfort, a lightweight and breathable mattress pad solution, is designed to improve rest onboard through ultra-soft materials that are fully washable and maintain performance over time.

Linstol says the innovations reflect a broader shift in the role of textiles, moving beyond functionality to become a key component of wellbeing, brand identity and overall passenger satisfaction.

Cloud Comfort mattress pad and sleep accessories highlight Linstol's focus on softness, breathability and onboard rest

The company adds that the three solutions represent a cross-cabin approach, combining comfort, performance and sustainability to meet evolving airline and passenger expectations.

With more than 30 years of experience in inflight product design, Linstol continues to focus on integrating craftsmanship and innovation into textile solutions that support a more elevated onboard experience.
