

Procurall Solutions advances wellness and sustainability in onboard design

This is a special feature from the [April 2026 WTCE Hamburg issue](#) of *PAX International*, on [page 15](#).

Procurall offers a portfolio of amenity kits, regenerative textiles, premium bedding and performance-driven sleepwear aimed at creating more restorative inflight environments

[Procurall Solutions](#) is advancing a holistic approach to onboard product development, combining sustainability, passenger well-being and operational efficiency across multiple inflight categories.

The company's portfolio includes amenity kits, regenerative materials, premium textiles and performance-driven sleepwear and bedding enhanced with Biocrystal® technology, designed to support relaxation and improved sleep quality while helping create more restorative inflight environments. Procurall says it evaluates every material, fiber and formulation for environmental impact, circularity potential and long-term performance.

Alongside comfort solutions, the company is integrating wellness-focused innovations aimed at improving rest and reducing fatigue throughout the passenger journey. According to Procurall, these developments reflect a growing industry focus on wellness as a core element of the travel experience.

In the onboard dining space, Procurall is also developing premium service ware and lightweight

disposable alternatives using circular materials, bio-based polymers and weight-reduction strategies. These programs are designed to help airlines lower environmental impact while maintaining a high-end presentation.

Procurall's approach combines global brand partnerships with disciplined sourcing and measurable sustainability strategies, helping airline customers deliver onboard programs that balance passenger comfort with responsible design.
