

ITW Envopak launches Mini Uno security seal

This is a special feature from the [November 2025 Middle East, Asia & Africa digital issue](#) of *PAX International*, on [page 10](#).

Designed with sustainability in mind, the Mini Uno is made from 100 percent recycled material

[ITW Envopak](#) is set to expand its airline security offerings with the introduction of the Mini Uno, a smaller version of its widely used Uno Seal, currently deployed on more than 4,500 aircraft worldwide.

Designed with sustainability in mind, the Mini Uno is made from 100 percent recycled material. It reduces plastic usage by 41 percent compared to the standard Uno Seal while allowing for a 66 percent increase in the number of seals per pallet. These improvements translate into significant savings in both shipping and storage for airline customers.

The launch of the Mini Uno underscores ITW Envopak's commitment to combining operational efficiency with environmental responsibility, providing airlines with a more sustainable option for securing inflight service trolleys and catering units.

"With the Mini Uno, we are delivering the same trusted security and ease of use that airlines rely on, while reducing material use and maximizing efficiency," Nicky Slater, Business Development Manager Airlines at ITW Envopak, tells *PAX International*.
