

Automatic Cutlery Sorter returns to WTCE

This is a special feature from the [April 2026 WTCE Hamburg issue](#) of *PAX International*, on [page 9](#).

The automatic cutlery sorting machine boasts durability, hygiene and efficiency

After turning heads on last year's WTCE showfloor, [Diskomat](#) and Wexiödisk are bringing the Automatic Cutlery Sorter back to booth 1G10.

With the pandemic firmly in the past and airlines moving away from disposable cutlery—even in Economy—demand for automated sorting solutions is on the rise, says Tomas Jämtander, Marketing Director, Flight catering solutions at Diskomat.

“Beyond its short ROI, caterers appreciate the ACS400HC for improving staff ergonomics and eliminating repetitive, monotonous tasks,” Jämtander adds.

The ACS400HC sorts up to 5,000 cutlery pieces per hour and can be programmed for up to 30 different airlines, cabin classes or cutlery designs.

Also on display at the booth will be the classic WD-18CW cart washer, which cleans airline carts using minimal water and energy thanks to its unique centrifugal technique.
