

Diskomat and Wexiödisk see strong engagement for Automatic Cutlery Sorter at WTCE 2026

This is a special feature from the [May 2026 Post-WTCE/Awards issue](#) of *PAX International*, on [page 6](#).

The Diskomat booth at WTCE 2026

[Diskomat](#) and [Wexiödisk](#) are reporting another successful return to WTCE last month, marking their 12th year at the event, with the Automatic Cutlery Sorter once again drawing strong interest at booth 1G10.

The companies showcased the ACS400HC machine as demand continues to grow for automated cutlery handling, driven by airlines moving away from disposable cutlery—even in Economy—and seeking more efficient onboard and catering processes.

Tomas Jämtander, Marketing Director, Flight Catering Solutions at Diskomat, tells *PAX International* the quality of engagement stood out this year.

“WTCE 2026 provided a valuable platform for us. The week was filled with meaningful conversations and great reconnects with long-standing partners, along with several strong new introductions. The discussions were focused and of very high quality.”

The ACS400HC, which can sort up to 5,000 pieces of cutlery per hour and handle up to 30 airline configurations, remained a key talking point for efficiency and ergonomics.

Also on display was Wexiödisk's WD-18CW cart washer, highlighting low-water, low-energy cleaning technology for airline catering operations.
