Singapore Airlines enhances KrisWorld, introduces Starlink connectivity

This is a special feature from the November 2026 APEX FTE EXPO issue of *PAX Tech* on page 10.

KrisWorld features a redesigned interface with improved navigation and personalized entertainment options

Singapore Airlines is enhancing KrisWorld with upgraded displays, spatial audio technology, personalized content and new digital wellness features. The system will feature 32-inch 4K touchscreens in First Class and displays measuring up to 22 inches in Business Class. On the 777-9, screens will measure up to 16 inches in Premium Economy and 13 inches in Economy Class. OLED screens will also be available on select aircraft.

First Class passengers will receive Bang & Olufsen noise cancelling Bluetooth headphones, while all passengers will be able to connect personal Bluetooth headphones.

A redesigned interface offers larger icons, improved search and a mini-player for watching content while browsing. The sidebar displays flight information without interrupting playback, while a dedicated Kids' Mode will provide age-appropriate entertainment.

On retrofitted A350-900 long-haul, A350-900ULR aircraft and the 777-9, First Class and Business Class passengers can save seat positions for future flights. First Class passengers can also save lighting preferences.

A wellness planner will provide guided meditation, breathing exercises and stretching videos.
