SOAP Powder Hand Soap packets by FloraLife

[FloraLife](#), a division of [Smithers-Oasis Company](#), has announced today that it is extending its FloraLife® Cleaner Products line to include SOAP.

Available in liquid and powder forms, fragrance-free SOAP is individually packaged in single-use packets ideal for travel kits containing the right amount of soap to wash hands on the go, eliminating the need to touch public soap dispensers and bars. The packets are light, small and easy to carry and store. The packets are also easily and safely shareable.

“We know that hand soap is highly effective at controlling the spread of viruses. In fact, the World Health Organization strongly supports the use of hand soap to remove viruses from our hands,” said Jim Daly, Vice President, FloraLife/Oasis Grower Solutions Global Operations and Corporate Research. “If you are using hand sanitizer on dirty hands and don’t pre-clean your hands with soap, all that you

are doing is sanitizing the dirt and not the surface that is underneath it. Ideally, you should wash your hands with soap as a first step. SOAP is a convenient and effective product for removing dirt and viruses wherever you are, whatever you are doing.

SOAP is available in 3-milliliter liquid and 1-gram powder packets. Both versions are available in 50-pack consumer cartons, 100-pack display boxes and 2,000-pack bulk boxes. The soap packets can be purchased [online](#) and shipped globally or by contacting a FloraLife representative.

The addition of SOAP extends the [FloraLife Cleaner Products line](#), which includes FloraLife D.C.D. and FloraLife MicroBLOC disinfectants - which meet EPA criteria for use against COVID-19 - and hand sanitizer.

FloraLife has been in the floricultural and disinfectant business for 29 years and has more than 80 years of experience in microbiology research. It has recently expanded beyond its flower care focus to provide a variety of industries and consumers with products to address changes in cleaning norms due to COVID-19.
