

Plane Talking Products unveils Dual-Cool Blanket for personalized comfort

The Plane Talking Products Dual-Cool Blanket is lightweight, durable and easy to handle, making it a practical option for airlines while maintaining a premium feel for passengers

Finding a comfortable temperature for all passengers onboard is a challenge. One moment the cabin feels warm, the next passengers are reaching for an extra layer. [Plane Talking Products](#) Dual-Cool Blanket is designed to solve that problem, offering two comfort experiences in one product.

Designed with both comfort and practicality in mind, the lightweight blanket adapts to passenger needs throughout the journey. One side delivers an instant cooling sensation with specialized fibers engineered to move heat away from the body, ideal for warm temperatures in the cabin. The durable cooling fibers remain effective through repeated washes and use.

On the opposite of the blanket, the experience changes. The reverse offers a soft, cozy texture designed to provide warmth and comfort in cooler temperatures, creating a versatile, personally customizable solution for passengers from takeoff to landing.

This design offers a fresh approach to onboard relaxation, helping travelers stay comfortable throughout their journey.

“At PTP we blend innovation and technology with functionality and luxury,” Alison Wells, CEO, Plane Talking Products, tells *PAX International*. “The Dual-Cool Blanket is the next evolution in onboard

textiles. Designed for the passenger, engineered for travel.”
