

WTCE spotlight: SwedSafe's Premium foam earplug

The x-emboss at the back of the premium earplugs gives the user a better grip which makes the insertion and removal easy

[SwedSafe](#), the only manufacturer of foam plugs in Europe, is heading to WTCE Hamburg this year June 6 to 8 to highlight its complete range of earplugs. In addition to foam plugs, the company produces reusable plugs, silicone plugs and wax plugs.

The Premium earplug is SwedSafe's highest-quality earplug. It attenuates as much as SNR 37 dB and the soft foam makes the product suitable for most ear canals. Like all SwedSafe foam plugs, Premium is made of soft polymer foam to make it comfortable and easy to use.

The x-emboss at the back of the premium earplugs gives the user a better grip which makes insertion and removal easy. The design also reduces the pressure against the outer part of the ear canal, which gives the user a more comfortable experience. "Premium removes disturbing noise, making it suitable for situations where one strives for a calm environment for sleeping, concentration or relaxation," a company pamphlet describes.

Packaging and colour alternatives are available.
