

ACS UK showcases innovative OMNIA platform

This is a special feature from the [April 2026 AIX Hamburg issue](#) of *PAX Tech*, on [page 9](#).

ACS UK will highlight its custom aircraft interiors expertise through OMNIA at AIX 2026

At [AIX 2026](#), [ACS UK](#) will highlight its extensive custom aircraft interiors expertise through OMNIA, a concept comprising two hybrid units, a center galley and an outboard monument.

Derived from the Latin word meaning “all things” or “everything,” OMNIA encapsulates ACS UK’s design, engineering and manufacturing capabilities in one cohesive solution. Moving beyond the catalog products or fixed concept packages typically on display, OMNIA serves as a flexible canvas to demonstrate a broad range of cabin design possibilities.

The centre unit can function as a welcome panel, galley, bar area or branding panel, while the outboard unit offers flexibility as stowage, closet, bar, self-service area or integrated Front Row Monument.

Nigel McSorley, CEO of ACS UK, tells *PAX Tech*, “Cabin spaces must work harder than ever, serving multiple purposes for crew and passengers at different times. They also help airlines to differentiate from one another and to elevate the onboard experience. OMNIA demonstrates how collaboration between airlines, designers and manufacturers can optimize cabin space and deliver a premium feel to delight customers.”
