DKA Aerospace unveils Smart Cart Platform for real-time galley asset visibility

This is a special feature from the November 2026 APEX FTE EXPO issue of *PAX Tech* on page 9.

The digital platform tracks inventory, movement, maintenance and lifecycle performance using equipment airlines already have

DKA Aerospace, a member of the LHM Group, is highlighting the release of Smart Cart. The digital platform gives airlines real-time tracking of galley carts across the entire operation.

Airlines want better ways to track galley equipment, but carts still pass through multiple stages of handling without a digital record of where each cart has been, DKA tells *PAX Tech*. That makes it difficult to validate compliance, track inventory or maintain chain of custody. Smart Cart addresses these challenges with instant access to geolocation, status logs and analytics worldwide.

The platform's key features include integration with existing equipment, , connected visibility, predictive intelligence, instant damage reporting and global tracking.

By turning operational blind spots into strategic advantages, Smart Cart gives the airline greater control over its equipment and supports more informed operational and maintenance decisions.

DKA Aerospace is exhibiting at APEX FTE EXPO at Stand 921.
