

Driessen Catering highlights waste trolley solutions

Driessen Catering's waste trolley

Driessen Catering highlights its waste trolley solutions for clean recycling and disposal as part of an elevated passenger experience. The company has a lineup of Waste Trolley products designed to help keep the cabin hygienic and visually clean. Driessen Catering's trolley solutions are promoting sustainability and cabin hygiene by optimizing space and decreasing the volume that trash takes up onboard.

Waste Trolley solutions from Driessen Catering

The company's Waste Trolley solutions are available in multiple sizes with accessories to meet each airline's unique disposal needs. There are full-size and half-size waste trolleys along with "plug and play" accessories to help staff maintain the cabin more easily.

The Waste Trolley solutions feature multiple lid and bin options including a normal bin, tilting bin and sorting bin, to meet the needs of the cabin crew. The tilting bin option has the ability to decrease overall waste volume by up to 60 percent during the flight, according to Driessen Catering. The tilting bin allows airline staff to use the bin even while the trolley is fully stowed in the galley. It opens to provide extra space on top of the trolley during trash collection. It can also be used to convert existing half-size meal trolleys to waste trolleys.

The sorting bin option allows airline staff to separate solid and liquid waste as needed. They can sort and stack waste materials, optimizing speed and convenience while decreasing the overall waste

volume by 13 percent. This bin style maximizes internal space, letting service staff collect and store even more waste inside.

Durable materials and sustainability

The Waste Trolley solutions are designed to be lightweight, water-tight and long-lasting. They have an intuitive design that makes it possible for cabin crew to efficiently collect, sort, separate, and recycle all types of common waste, including liquids. The trolleys also reduce clutter.

Driessen Catering's waste trolleys serve the environment by facilitating the recycling of collected materials by optimizing the waste volume inflight. The company is proud to be offering a modern and sustainable approach to waste management.

Passengers expecting hygienic inflight experiences

Now more than ever, a key element of a positive passenger experience is onboard cleanliness, explained the company, adding that passengers value a cabin that appears clean and is hygienic. The Waste Trolley solutions are one way to improve the overall cleanliness and appearance of the cabin inflight, said the company.
