

Onboard Logistics simplifies inflight waste management for airlines

This is a special feature from the [April 2026 WTCE Hamburg issue](#) of *PAX International*, on [page 16](#).

Onboard Logistics will showcase products designed to simplify cabin and galley waste at WTCE 2026

[Onboard Logistics](#) continues to support airlines with products designed to simplify waste management in the aircraft cabin and galley, helping crew handle one of the most operationally challenging aspects of inflight service.

With more than two decades of participation at airline catering industry exhibitions, the company has developed a portfolio of solutions aimed at making waste handling more efficient during flights. Its products are designed specifically to assist cabin crew with the collection, storage and organization of waste generated throughout the service flow.

Onboard Logistics also works with airline partners to develop inflight products that improve waste management processes in both the cabin and galley areas. A key focus is enabling easier waste segregation onboard, supporting airline sustainability initiatives while reducing complexity for crew during busy service periods.

According to the company, practical design and close collaboration with airlines remain central to

creating solutions that help streamline inflight operations. Onboard Logistics can be found at booth 1E111.
