

Onboard Logistics to showcase space-saving and waste solutions at WTCE

The Flex-e-Bag by Onboard Logistics

[Onboard Logistics](#) is set to present its latest waste management and galley optimization innovations at WTCE 2025. The company's Flex-e product line is designed to help airlines streamline inflight waste collection, maximize galley space and enhance operational efficiency.

Key solutions on display will include the Flex-e-Bag, a disposable bag and frame that transforms meal trolleys into waste collectors, reducing the need for additional waste carts. Complementing this is the Flex-e-Clip, a reusable metal frame that attaches a Flex-e-Bag to a trolley, facilitating efficient waste collection during services.

To further optimize space, Onboard Logistics will showcase the Flex-e-Drawer, Stackable atlas-sized plastic drawers that conserve galley space by nesting when not in use, allowing trolleys to serve multiple purposes. Additionally, the Flex-e-Frame3R will be on display, an eco-friendly, reusable frame designed to minimize single-use plastics, aligning with sustainability goals.

By adopting these solutions, airlines can reduce aircraft weight, lower fuel consumption, and free up space for revenue-generating services.

Visitors can explore these innovations at booth 1E111.
